

Lavender Calhoun

Redford, MI 48239 | +1 (313) 564-9485 | lmcalhoun01@gmail.com

Results driven computer science grad focused on ML/AI solutions and project management.

Experience

SULI Department of Energy Intern

May 2024 - Aug 2024

Argonne National Lab

- Contributed to a Python library for streamlining machine learning workflows on Linux systems with high-performance computing nodes.
- Automated dataset generation for molecular dynamics simulations, reducing manual processing by 45%
- Optimized training cycles by creating workflows to generate datasets addressing model weaknesses.

Undergraduate Student Researcher

Dec 2022 - Apr 2023

Wayne State University

- Explored the Neural Radiance Fields (NeRF) algorithm, focusing on its architecture, principles, and applications.
- Refined data preparation and model optimization through analysis of novel view interpolation to improve performance.

Accessibility Design Intern

Jun 2022 - Aug 2022

Wilson Adaptive Technologies

- Redesigned the main website to enhance user experience, accessibility, and branding.
- Developed a comprehensive style guide; standardizing color palettes, fonts, and design elements following the redesign.
- Conducted user interviews and created detailed profiles to inform design decisions.

CADeT Cyber Initiative Student Employee

Sept 2020 - Apr 2021

MTU Great Lakes Research Center

- Developed hands-on experience in machine learning by using the YOLO v3 algorithm to identify armored fighting vehicles from photographic datasets.
- Performed data analysis and visualization on seasonal impacts on U.S. energy usage.
- Led a presentation on research findings, demonstrating the practical applications of machine learning and data analysis techniques.

Projects

Tune Tracer

Flutter/Dart, Python (TensorFlow, Keras, Librosa, Flask), Firebase, Heroku, GitHub

- As Team Leader, directed the development of app objectives according to client needs.
- Applied a machine learning model to predict the modality of a song with 94% accuracy.
- Designed a record/upload audio function, UI elements, and the machine learning model.
- Created an API server to handle prediction requests using Flask and Heroku.

Education

Bachelor of Science (B.S.) - Computer Science 3.67 GPA

May 2024

Wayne State University, Detroit, MI

SKILLS

Python, Javascript/HTML/CSS, C++, Java, SQL, C, Bash, TensorFlow, Keras, Fireworks, Node.js, Flutter/Dart, Seaborn, Git, Linux, Heroku, MongoDB, Firebase, Docker
